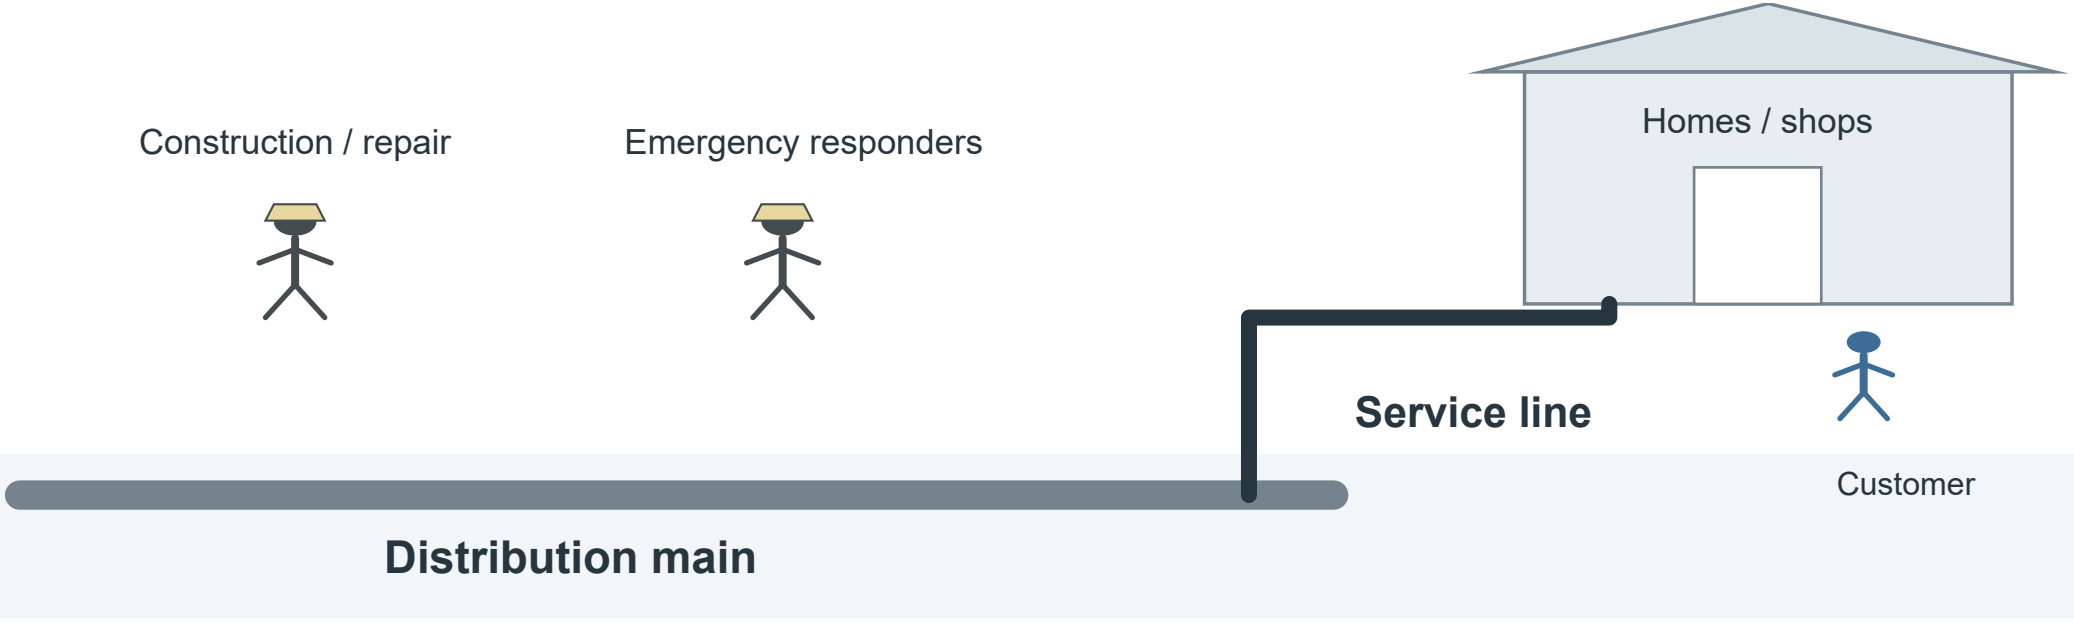
Understanding casualties in gas distribution incidents

Mains supply the street network. Service lines connect customers. Three analyses address the consequences.



01

People in incidents

Components and property

Who was hurt, and what happened

02

Materials in the network

Materials and network size

Mileage, age and consequences

03

Value of basic information

Rules from earlier reports

Results checked on later reports

System schematic. People illustrate possible roles. The three tasks address different parts of the research question.
