Cast / wrought iron has a higher casualty-report rate

Mains and main valves, 2010–2024: 693 reported incidents, including 141 casualty reports.

Unit example. Actual E = Σ(year-end miles × 1 year). Rate = casualty reports ÷ E × 10,000.

Lines show 95% intervals from joint jurisdiction resampling. Year-end mileage approximates each year's operating scale.
Cast / wrought iron uses its own mileage category. Steel and plastic each use their corresponding mileage.
